EFLHD SUPPLEMENT 9.6.6.1-1

9.6.6.1 Computation of Quantities

Add the following after the third paragraph:

Do not use notes such as "No Pay" in the plans, except for quantities in the Summaries and Schedules that are shown for information only. Include clauses such as "Do not measure…for payment" in the applicable measurement subsections of the SCRs for a project whenever a certain work item is paid for directly in some cases, but where the same work is not paid for directly in other cases; an example would be aggregate base that is paid for directly for new construction, but that is paid for indirectly when it is part of a pavement patch.

Include a tack coat pay item in all projects where asphalt concrete pavement is constructed.
